

## Using the Sun to Work for You

Solar powered water pumps create an independent power station to pump water for livestock use or any situation in which you need remote water pumping. A DC pump, controller, and solar panels are used to keep your water flowing. If you need an independent power source to pump your water, come see **Atlasta Solar Store.**

**Working  
year round  
to keep  
you warm  
and in the  
light!!!**

Atlasta Solar can create a solar-powered water pumping set-up that works for your needs. If you need a pumping station to water your cattle, horses, or for other pumping needs in an area that does not have power lines, this system is for you. This system is made to be simple but extremely useful and almost maintenance free. It consists of solar panels that create enough energy to power a pump. This energy is fed through a controller, which regulates the power so that the pump gets enough but not too much. Your remote watering station takes care of itself!

## Lorentz Submersible Solar

### Water Pumps

The Lorentz submersible solar water pumps are the choice for reliability and life expectancy. Atlasta Solar carries three main styles of the Lorentz pump, depending on how deep the water source is and also the water demand that will be asked of it. The Lorentz PS200 pump lifts from as deep as 165 feet, the Lorentz PS600 from as deep as 600 feet and the Lorentz PSI200 from as deep as 760 feet. Also, the larger the pump the more ability of it to pump more gallons of water per day. All three of these pumps fit a 4" and larger well casing and have a high resistance to sand and silt corrosion. For safety, the controller displays when the system is on, when the pump is on, pump speed, when the tank is full, when water source is low, overload, or if batteries are low. A low water probe (included) turns pump off to prevent dry run damage. This unit also comes with a 2 year manufacturers warranty for defects in material & workmanship.

*If you want more options on watering the source of your livelihood, come talk to Atlasta Solar today. We can put our solar water pumping stations just about anywhere you may need it to be. As long as the sun can reach it, we can find a way to put it together!*
